WHAT IS CRYPTO TRADING ?

Cryptocurrency trading is the practice of speculating on the price movements of digital currencies, such as Bitcoin and Ethereum, in order to make a profit. It's similar to trading traditional stocks or other financial assets, but with some unique characteristics

CRYPTO TRADING FUNCTIONALITY

High Liquidity: The ability to execute trades quickly and with minimal price impact. High liquidity ensures there are enough buyers and sellers to fill orders efficiently.

Order Types: Platforms offer various order types to allow for different trading strategies: Market Order: An order to buy or sell at the current market price

TYPES OF BLOCKCHAIN

PUBLIC BLOCKCHAIN :

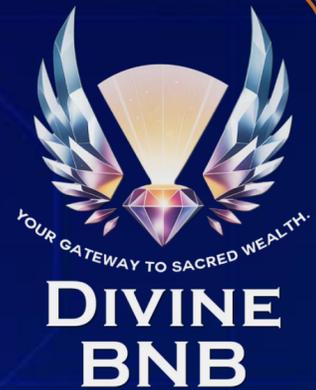

- Open to everyone (decentralized, permissionless).
- Anyone can join, validate transactions, or participate.
- **Examples:** Bitcoin, Ethereum.

PRIVATE BLOCKCHAIN :

- Restricted access controlled by one organization.
- Invited participants validate/view.
- **Examples:** Hyperledger, Corda

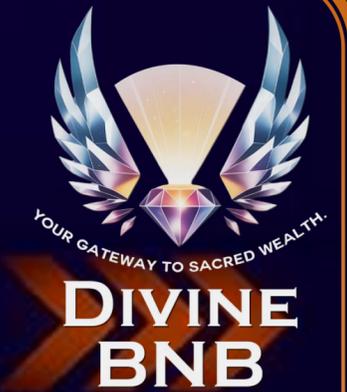

CONSORTIUM BLOCKCHAIN :

- Controlled by group of organizations.
- Partly decentralized.
- **Examples:** Energy Web Foundation, Quorum.

WHAT IS CRYPTOCURRENCY ?

Currency is anything that is generally accepted to have value as a medium of exchange so that it can be traded for goods and services. The trading system within an economy is based on its currency, which is usually specific to a country and issued by that country's government or by blockchain like Bitcoin called digital assets or currency

CURRENCY

COIN:

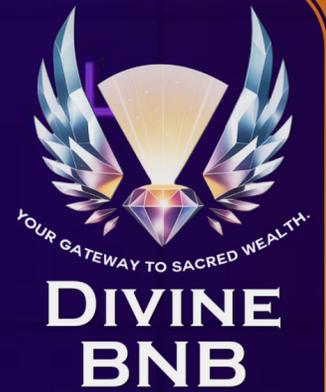

- Digital currency; operates on its own blockchain, used for payments.
- **Examples:** Bitcoin, ETH.

TOKEN:

- Digital asset issued on a project; not on its own blockchain.
- Used for payments or agreements.

FIAT / STABLE:

- Gateway from fiat to crypto 100% backed, regulated.
- **Examples:** USDT, BUSD, USDC.
